

Defensible eDiscovery

Solidify Your Case in Court

Integrated Solutions for Defensible eDiscovery and Regulations Compliance

Defensible eDiscovery requires traceability and controlled data flow at every step, from origination up to the time data is presented in court. And to be defensible it must not be able to be modified – by anyone at any time.

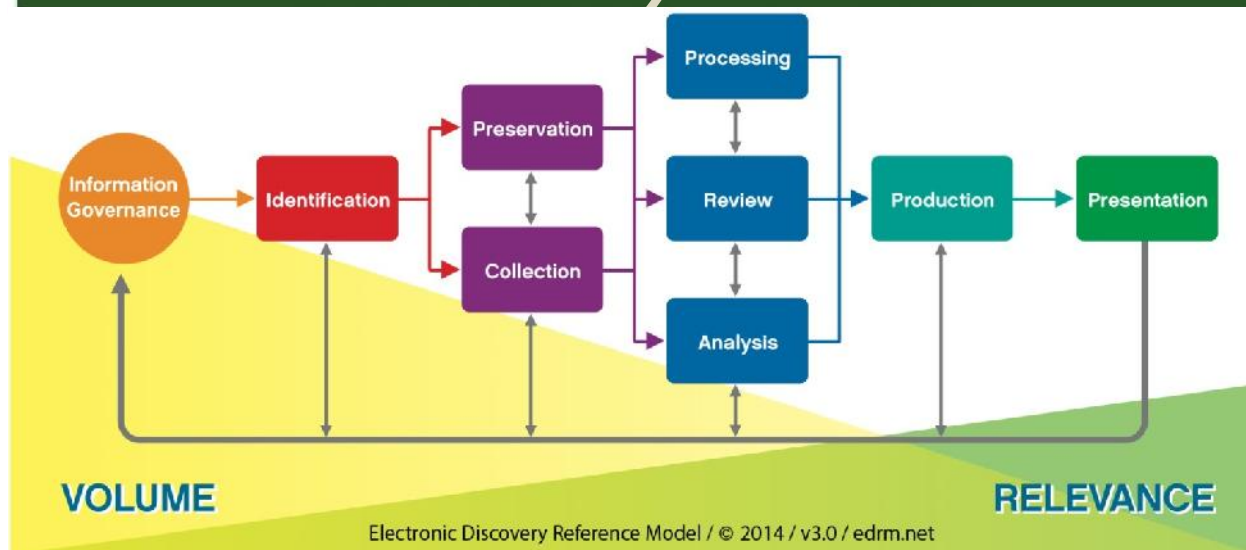

The integrated GreenTec WORMdisk™ and OpenText Content Suite solution provides secure controlled data acquisition, identification, preservation, collection processing, review analysis, production and presentation.

Our eDiscovery Framework provides full control and auditability throughout the process with evidentiary data, discovery search criteria, analytics and metadata saved onto immutable high-speed secure WORMdisks™ that cannot be modified, altered, deleted or re-formatted. WORMdisks™ are a perfect media for presentation as evidence in court and connect via standard SATA, eSATA or USB computer interfaces with Windows, Linux or Mac OS/X.

Enterprise Records are bound by Regulations

- SEC 17a-3 and 17a-4
- OMB Capstone
- Sarbanes-Oxley Act
- HIPAA
- DoD 5015.02-STD

- Federal Rules of Civil Procedure
- Canadian Electronic Evidence Act
- Basel II Capital Accord
- Electronic Ledger Storage Law
- 11 MEDIS-DC
- AIPA
- GDPdU & G0BS & DOMEA
- NF X 42-013
- VERS
- Financial Services Authority

The eDiscovery Framework

The Electronic Discovery Reference Model

EDRM develops guidelines and standards for e-discovery consumers and providers. From the original model to the current projects, EDRM has helped e-discovery consumers and providers reduce the cost, time and manual work associated with e-discovery.
